John Day: Jobs, Power

With both Congress and the Elmore development now talking about power, public works to absorb the unemployed and raise the general economy, projects for the reasonable appropriation of power should be given the necessary consideration. These projects are being looked over by the state power officials.

In a letter to the editor, "In the interest of the state," John Day Dam by appropriating one billion dollars, is one idea that has been suggested that included only one million. The timber was to be sold for $50 per cord, and $20 for the $1,000,000. Sen. Wayne Moore says he will try to get the state to take charge of the entire project, and Monday's Times-Record reported that the project would cost the state $20 million for the Green Peter Dam in the John Day.

In his letter to the editor, the Clatsop County Democratic Committee, among those the Democratic committee had, had been out on a tour of inspection.

Gap in the Law

In connection with the state’s efforts to improve the conditions of the state’s farms, a section of the law that allows for the development of irrigation districts is being considered. The law is being considered by the state’s Legislature. The law is being considered by the state’s Legislature. The law is being considered by the state’s Legislature. The law is being considered by the state’s Legislature. The law is being considered by the state’s Legislature.

Natural’s Still Rules

Monday’s storm, which moved up the Pacific Coast from northern California, has also moved up the West Oregonian and West Washington, with the help of the local weather. The storm, which was a battle of air masses, was a battle of power.

The Weather Bureau first spotted the storm moving up the coast, and knew that winds would blow along the coast. The storm was moving up the coast for a couple of days. It was a battle of air masses.

The meeting of the cold air mass from the north with the warm air mass from the south will result in the high winds that will last throughout the day. The barometer dropped to its lowest point, to the highest point.

The storm, which was a battle of air masses, was a battle of power.

Odd Political Bird

It’s not easy for a North American bird to survive in the winter. The birds in the west are faced with the problem of finding food and shelter. The birds in the west are faced with the problem of finding food and shelter. The birds in the west are faced with the problem of finding food and shelter. The birds in the west are faced with the problem of finding food and shelter. The birds in the west are faced with the problem of finding food and shelter.

He’s Very Sensible Just Now

Washington Yield Atom Waste; Congressmen Plan Study

By ROBERT S. ALLEN

WASHINGTON - The Joint Congressional Atomic Energy Committee, a joint Senate and House panel, voted today to release a report on the safety of nuclear power reactors.

The report, which was being reviewed by the Senate and House committee, was considered by both chambers. The report was released by the Atomic Energy Commission.
